

Quick Overview of VDM Operators

General

if *predicate* **then** Expression **else** Expression

exists *p* **in** **set** setOfP & predicate(*p*)

forall *p* **in** **set** setOfP & predicate(*p*)

cases expression:

(pattern list 1)-> Expression 1,

(pattern list 2),

(pattern list 3)-> Expression 2,

others -> Expression 3

end;

for **all** value **in** **set** setOfValues

do Expression

dcl variable : *type* := Variable creation ;

let variable : *type* = Variable creation **in** Expression

The Boolean type

Operator	Name	Signature
not <i>b</i>	Negation	bool → bool
<i>a</i> and <i>b</i>	Conjunction	bool * bool → bool
<i>a</i> or <i>b</i>	Disjunction	bool * bool → bool
<i>a</i> => <i>b</i>	Implication	bool * bool → bool
<i>a</i> <=> <i>b</i>	Biimplication	bool * bool → bool
<i>a</i> = <i>b</i>	Equality	bool * bool → bool
<i>a</i> <> <i>b</i>	Inequality	bool * bool → bool

The numeric types

Operator	Name	Signature
- <i>x</i>	Unary minus	real → real
abs <i>x</i>	Absolute value	real → real
<i>x</i> + <i>y</i>	Sum	real * real → real
<i>x</i> - <i>y</i>	Difference	real * real → real
<i>x</i> * <i>y</i>	Product	real * real → real
<i>x</i> / <i>y</i>	Division	real * real → real
<i>x</i> div <i>y</i>	Integer division	int * int → int
<i>x</i> mod <i>y</i>	Modulus	int * int → int
<i>x</i> ** <i>y</i>	Power	real * real → real
<i>x</i> < <i>y</i>	Less than	real * real → bool
<i>x</i> > <i>y</i>	Greater than	real * real → bool
<i>x</i> <= <i>y</i>	Less or equal	real * real → bool
<i>x</i> >= <i>y</i>	Greater or equal	real * real → bool
<i>x</i> = <i>y</i>	Equal	real * real → bool
<i>x</i> <> <i>y</i>	Not equal	real * real → bool

The character, quote and token types

Operator	Name	Signature
<i>c1</i> = <i>c2</i>	Equal	char * char → bool
<i>c1</i> <> <i>c2</i>	Not equal	char * char → bool

Tuple types

Operator	Name	Signature
<i>t1</i> = <i>t2</i>	Equality	T * T → bool
<i>t1</i> <> <i>t2</i>	Inequality	T * T → bool

Record types

Operator	Name	Signature
<i>r.i</i>	Field select	A * Id → Ai
<i>r1</i> = <i>r2</i>	Equality	A * A → bool
<i>r1</i> <> <i>r2</i>	Inequality	A * A → bool
is <i>A</i> (<i>r1</i>)	Is	Id * MasterA → bool

Union and optional types

Operator	Name	Signature
<i>t1</i> = <i>t2</i>	Equality	A * A → bool
<i>t1</i> <> <i>t2</i>	Inequality	A * A → bool

Set types

Operator	Name	Signature
<i>e</i> in set <i>s1</i>	Membership	A * set of A → bool
<i>e</i> not in set <i>s1</i>	Not membership	A * set of A → bool
<i>s1</i> union <i>s2</i>	Union	set of A * set of A → set of A
<i>s1</i> inter <i>s2</i>	Intersection	set of A * set of A → set of A
<i>s1</i> \ <i>s2</i>	Difference	set of A * set of A → set of A
<i>s1</i> subset <i>s2</i>	Subset	set of A * set of A → bool
<i>s1</i> = <i>s2</i>	Equality	set of A * set of A → bool
<i>s1</i> <> <i>s2</i>	Inequality	set of A * set of A → bool
card <i>s1</i>	Cardinality	set of A → nat
dunion <i>ss</i>	Distributed union	set of set of A → set of A
dinter <i>ss</i>	Distributed intersection	set of set of A → set of A

Sequence types

Operator	Name	Signature
hd <i>l</i>	Head	seq1 of A → A
tl <i>l</i>	Tail	seq1 of A → seq of A
len <i>l</i>	Length	seq of A → nat
elems <i>l</i>	Elements	seq of A → set of A
inds <i>l</i>	Indices	seq of A → set of nat1
<i>l1</i> ^ <i>l2</i>	Concatenation	(seq of A) * (seq of A) → seq of A
conc <i>ll</i>	Distributed concatenation	seq of seq of A → seq of A
<i>l</i> ++ <i>m</i>	Sequence modification	seq of A * map nat to A → seq of A
<i>l</i> (<i>i</i>)	Sequence index	seq of A * nat1 → A
<i>l1</i> = <i>l2</i>	Equality	(seq of A) * (seq of A) → bool
<i>l1</i> <> <i>l2</i>	Inequality	(seq of A) * (seq of A) → bool

Mapping types

Operator	Name	Signature
dom <i>m</i>	Domain	(map A to B) → set of A
rng <i>m</i>	Range	(map A to B) → set of B
<i>m1</i> munion <i>m2</i>	Map union	(map A to B) * (map A to B) → map A to B
<i>m1</i> ++ <i>m2</i>	Override	(map A to B) * (map A to B) → map A to B
merge <i>ms</i>	Distributed merge	set of (map A to B) → map A to B
<i>s</i> <: <i>m</i>	Domain restrict to	(set of A) * (map A to B) → map A to B
<i>s</i> <-: <i>m</i>	Domain restrict by	(set of A) * (map A to B) → map A to B
<i>m</i> >: <i>s</i>	Range restrict to	(map A to B) * (set of B) → map A to B
<i>m</i> :-> <i>s</i>	Range restrict by	(map A to B) * (set of B) → map A to B
<i>m</i> (<i>d</i>)	Mapping apply	(map A to B) * A → B
<i>m1</i> = <i>m2</i>	Equality	(map A to B) * (map A to B) → bool
<i>m1</i> <> <i>m2</i>	Inequality	(map A to B) * (map A to B) → bool

Class Example

```
class Person

types
public String = seq of char;

values

protected Name : seq of char = "Peter";

instance variables

public nationality : seq of char:="Danish";
comment          : String;
yearOfBirth      : int;
sex              : Male | Female;
friends          : map String to Person;

operations

public GetAge : int ==> int
GetAge(year) == CalculateAge(year,yearOfBirth)
pre pre_CalculateYear(year,yearOfBirth);

functions

public CalculateAge : int * int -> int
CalculateAge (year,bornInYear) == year-bornInYear
pre year >= bornInYear;

thread
while true do
  skip;

traces
  Mytrace: regular expression using operation calls

end Person

class Male is subclass of Person
end Male
class Female is subclass of Person
end Female
```

Listing 1: Class Example
